KNAUF INSULATION

Bob Stark - Systems Manager

“Knauf Drywall has used TeamVisual software for several years as the chief method of recording and managing our sales team’s customer activities, whilst providing team members with easy access to essential information about their contacts.

We have always found MJH Data Systems Ltd to be effective and positive partners, and it was an easy decision to move to TeamVisual projects when the opportunity arose last year to further enhance the tools we provide with our sales team.

Following a very smooth roll-out of the new software, individuals and teams can now effectively manage and monitor large complex projects, and the system allows us to easily track promotional activity such as a product launch.”

Steve Halcrow – Technical Services Manager

“We have been using MJH’s TeamVisual software for 5 years and have been very impressed with how the system has evolved over this time.

The Support we have received has been excellent and we welcome the development of training services; we have always found their people to be willing to help, patient and above all flexible.

MJH’s training will be an ideal addition to the software development side of their business.”
